

KIDNEY DISEASE FACTS

OVER 1 IN 10 INDIVIDUALS IN THE US HAS KIDNEY DISEASE!

More than 20 million Americans are at risk of developing kidney disease and don't know it!

The number of kidney failure cases in the US has more than tripled since 1990 and is expected to grow because of an aging population!

Early diagnosis and treatment of chronic kidney disease (CKD) dramatically slows its course giving you a longer, more healthful life.

There are specific things you and your loved ones can do to prevent or delay the onset of CKD.

CKD is a progressive loss of kidney function over time and doesn't go away by itself.

The three main causes of chronic kidney disease are **DIABETES, HIGH BLOOD PRESSURE** and **OBESITY**

If you have any of these causes, see your doctor and get an estimated GFR (Glomerular Filtration Rate) assessment based on a simple blood test.
